Module 2 MiniProject

Customer Behaviour Analysis

Project Objective

To analyze customer shopping behavior, understand purchasing patterns across product categories and age groups, and examine subscription status and customer reviews using Excel and Power BI.

1. Data cleaning and transformation in Excel / Power Query

1. Imported the raw customer shopping behavior dataset.
2. Checked the dataset for missing values and data inconsistencies.
3. Handled the missing values in the dataset.
4. Performed data transformation using Power Query.
5. Prepared the cleaned dataset for analysis.
6. Saved the transformed dataset for use in Power BI.

2. Dashboard creation in Power BI

1. Imported the cleaned dataset into Power BI Desktop.
2. Checked column data types and data formatting.
3. Created KPI cards for:
    - Number of customers
    - Average purchase amount
    - Average review rating
4. Created visualizations for revenue and sales by category.
5. Analyzed revenue and sales by age group.
6. Visualized the percentage of customers by subscription status.
7. Added slicers for gender, subscription status and shipping type.
8. Designed an interactive dashboard to analyze customer shopping behavior.
